instructions for boards

## Consumer Packaging business area

M-real provides packaging materials and services on every continent of the globe. The main end uses include branded products such as food, health and beauty products, cigarettes and consumer durables.

M-real's Consumer Packaging business area produces high performance folding boxboards, linerboards, graphic boards and wallpaper base. Our board products are based on virgin wood fibre.

For more information, please visit M-real website: [www.m-real.com](http://www.m-real.com)

## Product safety instructions

Our instructions are to:

- ensure that our packaging boards, if used as intended, are safe for people and the environment.
- manage the hygiene and product safety risks throughout the entire supply chain, from global board and packaging development through to manufacture and distribution.
- meet or exceed legislative requirements.
- use raw materials of known origin.
- ensure the traceability of raw materials and finished products, especially for end use sectors with strict hygiene standards e.g. food packaging.

These product safety instructions are implemented by the individual production units of the Consumer Packaging business area in conjunction with relevant corporate functions. Implementation will be monitored and the instructions reviewed on an ongoing basis.

Tampere 1 April, 2011

Mika Joukio, SVP, M-real Consumer Packaging
